

How to install eclipse in linux mint : -

To install eclipse ide you can follow the instruction which is given below:-

1. Open eclipse official website and download “tar.gz” file.
2. Now create one folder in your username directory in my case `home/coder` is my username directory.(created file `eclipse-ide`)
3. Now run this command for extracting and copy paste the download file.
`“tar -zxvf filename.tar.gz -C /home/coder/eclipse-ide”`
4. After doing 3rd step we gonna add the eclipse ide in menu bar by running this command:-
`“sudo gedit /usr/share/applications/eclipse-ide.desktop”`
and add this code in eclipse-ide.desktop file

```
[Desktop Entry]
Encoding=UTF-8
Exec=/home/coder/eclipse-ide/eclipse/eclipse
Icon=/home/coder/eclipse-ide/eclipse/icon.xpm
Type=Application
Terminal=false
Comment=Eclipse Integrated Development Environment
Name=Eclipse Ide
GenericName=eclipse-4.6 M5
StartupNotify=false
Categories=Development;IDE;Java;
```

5. if gedit is not your internal command then install it from given command then do the step no 4th.

`“sudo apt-get install gedit”`

OR, open `/usr/share/applications/` as root and create a file name `“eclipse-ide.desktop”` and open as root this eclipse-ide.desktop from text editor then paste `[Desktop Entry]` which is given in step no 4th.

6. Then go inside programmin in menu and you will see Eclipse Ide is created in menu. Launch the Ide keep your Programming.
